Art Unit: 1775

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 13,21-23,25-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Sumitomo Electric (JP 58-67858).

Sumitomo Electric discloses the claimed inner layer and outer alumina layer on the claimed substrate with a titanium boronitride layer in between within the claimed proportions of boron and nitrogen (see abstract). The claimed roughness is considered inherent.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 14-20,24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sumitomo Electric (JP 58-67858).

Sumitomo Electric discloses the invention substantially as claimed except the claimed gradation through the thickness of the intermediate layer.

Art Unit: 1775

It would have been obvious to one of ordinary skill in the art to move through the layers and vary the components in the claimed manner, as this techniques is known in the coating art to improve the adherence of layers to one another.
